

Build an AI Content Engine with AI

Execution Path

A structured route from idea to working output - the steps, outcomes, workflows, resources, and tools, in order.

PATH SUMMARY

6 steps across 4 phases.

Use this document as a portable execution guide. Each step lists the expected outcome and the workflow, resource, and tool used in NewPrompt.

PHASE 1 · Define & Scope

Clarify what you're building and for whom.

Step 1 · Set the editorial strategy

Decide what the engine produces and why - the audience, the topics that serve a goal, the publishing priorities - so every piece the engine makes has a reason to exist instead of padding a backlog.

OUTCOME

An editorial strategy that tells the engine what to produce.

- Resource** Content Strategy Prompt Workflow
- Tool** Multi-Step Prompt Builder

Step 2 · Research the topics

Gather and synthesize the source material each topic needs, so the engine produces grounded, substantive pieces instead of confident generalities that say nothing.

OUTCOME

Researched, synthesized material to write each piece from.

USED IN THIS STEP

- Workflow** AI Research Synthesis Workflow
- Resource** Research Synthesis Assistant
- Tool** Structured Summary Prompt

PHASE 2 · Design

Design the right solution before building.

Step 3 · Build the reusable content template

Turn a good piece into a repeatable template - the structure, the variables, the sections every piece shares - so production is a process the whole team can run, not a prompt only one person knows.

OUTCOME

A reusable content template that makes production repeatable.

Workflow AI Reusable Prompt Template Workflow

Resource Blog Post Template

Tool Prompt Template Builder

PHASE 3 · Build & Refine

Build, test, secure, and make it production-ready.

Step 4 · Produce structured drafts

Run the template to draft each piece in a consistent structure - front matter, sections, metadata - so the output drops into a CMS clean instead of needing reformatting every time.

OUTCOME

CMS-ready drafts produced in a consistent structure.

Workflow AI Reliable JSON Output Workflow

Resource Markdown Output Prompt - Lock the Document Structure

Tool Markdown Output Builder

Step 5 · QA and organize the output

Before publishing, validate each piece against your quality rules and tag it into the content library - so the engine's output is checked and findable, not a folder of unsorted drafts.

OUTCOME

Each piece validated against quality rules and tagged.

USED IN THIS STEP

Workflow AI Classification Workflow

Resource Validate Classification Output

Tool AI Output Validator

PHASE 4 · Ship & Validate

Ship with confidence and validate results.

Step 6 · Validate the product with real evidence

Content is shipping - now measure whether it performs. Weigh traffic, engagement, and conversions against the goal you set for the engine, render a hit/partial/miss verdict, and decide whether to iterate, pivot, or scale output before spinning up more.

OUTCOME

The shipped outcome measured against its success signal, with an iterate, pivot, or scale decision documented.
