

Build a Documentation Website with AI

Execution Path

A structured route from idea to working output - the steps, outcomes, workflows, resources, and tools, in order.

PATH SUMMARY

5 steps across 4 phases.

Use this document as a portable execution guide. Each step lists the expected outcome and the workflow, resource, and tool used in NewPrompt.

PHASE 1 · Define & Scope

Clarify what you're building and for whom.

Step 1 · Plan the documentation set

Decide what the docs must cover and for whom - the getting-started path, the how-to guides, the reference, the FAQs - driven by the tasks readers actually need to complete, not by what's easy to write.

OUTCOME

A planned doc set tied to what readers need to do.

USED IN THIS STEP

- Workflow** AI Content Strategy Workflow
- Resource** Content Strategy Prompt Workflow
- Tool** Multi-Step Prompt Builder

PHASE 2 · Design

Design the right solution before building.

Step 2 · Structure the docs site

Organize the doc set into an information architecture - sections, hierarchy, and navigation - so a reader always knows where they are and what comes next, instead of getting lost three clicks in.

OUTCOME

An information architecture with a clear reading path.

USED IN THIS STEP

- Workflow** AI Website Structure Workflow
- Resource** Sitemap & Site IA Spec Prompt - Pages, Navigation, and Structure
- Tool** Markdown Output Builder

PHASE 3 · Build & Refine

Build, test, secure, and make it production-ready.

Step 3 · Write the guides and concepts

Write the conceptual and how-to documentation - the layer that explains how the product works and walks a reader through real tasks - in clear, consistent prose generated from the actual behavior.

OUTCOME

Guides and conceptual docs that explain and walk through tasks.

USED IN THIS STEP

Workflow	AI Content Writing Workflow
Resource	Technical Documentation Prompt
Tool	Markdown Output Builder

Step 4 · Write the API reference

Document the API surface as a distinct reference layer - endpoints, parameters, responses, examples - complete and consistent, because reference docs are where a developer ends up when the guides run out.

OUTCOME

A complete, consistent API reference.

USED IN THIS STEP

Workflow	AI Code Documentation Workflow
Resource	API Documentation Prompt
Tool	Markdown Output Builder

PHASE 4 · Ship & Validate

Ship with confidence and validate results.

Step 5 · Ship the docs site

Cross from built to live - check readiness, plan the deploy and a rollback, and decide what to watch - so the docs ship deliberately and the publishing pipeline is something you can rerun for every update.

OUTCOME

The documentation site shipped with a repeatable publish path.

USED IN THIS STEP

Workflow	AI Deployment & Release Workflow
Resource	Production Readiness Review Prompt
Tool	Markdown Output Builder
